

K7 HEREFORDS

ANNOUNCING:

BULL SALE

**Sunday,
March 22, 2020**

1 p.m. at the Farm

Selling 25 Bulls and 34 Heifers

K7 HEREFORDS

Tom and Jo Heidt Family
 3388 240th St. • Lockridge, IA 52635
 608-574-2309 • k7herefords@gmail.com

Greeting everyone,

Welcome to the K7 Herefords 12th Plus One Annual Production Sale. We have strived to be a producer that breeds our cattle in a form that will work for the cattle industry and your programs. We put emphases on keeping our birth weights lower and high growth rates that exceeds the breed average. Our cattle are bred to be moderate framed and moderate weight. With a goal of being above breed average in ribeye and marbling. This year we sorted very heavily for quality and structural soundness and feet.

The 2019 calves had to endure a few hurdles. In January, just as calving started full force the Polar Vortex hit! Yes, we have a few with short ears and might have lost a tip of tail or two, yet we made it through. Later, the weather improved and someone said, "send in the KNATTS!" really want to thank them---NOT. Then the floods came and it got really soggy, yet this also passed. Come June and July we dried out and the drought was here. As the weather changed again, we weaned the calves, and these calves really started to take off. We feel they are the most uniform set of calves we have ever produced.

We are very proud to say that we are offering all the K7 2019 heifer calf crop. We believe in selling our own product, we don't believe it's necessary to be buying a lot of cattle to produce replacements. Yes, we will buy a few select females along the way, but our goal is to be the kind of producers that have animals that will go out and work, animals that have good feet and moderate frame. Cattle that can go out and survive on grass, and the type of cows that don't need special feeding to be able to produce. These also are many of the same goals of our longtime K7 bulls and heifer customers, and longtime very close friends, Veesers' Triple E Farm, Powers, Michigan (Upper Peninsula). We welcome them as consignors again. Most of their genetics have K7 influence in their pedigrees. Mark and Veesers' Triple E have a wonderful offering again this year of a bull and three heifers. BWF has consigned some heifers to add to your choices of females, and we are pleased to welcome them to the selection of cattle this year. Jeff Heslep & Blaine Waire family from Arkansas.

Again, this winter the fall bulls are maintained on eight pounds of grain, corn silage, access to round bale feeder, and a creek for water. The fall yearling bulls after weaning came from the top 50% of 2018 fall bulls, sorted for quality, structural soundness, and feet. We ran them in a pasture this past summer getting five pounds of corn daily. This didn't slow these fall bulls down and they are performing well this winter. Our spring bull calves come to you out of the top half of 2019 bull crop, selected on performance, structural soundness with strong emphasis on good feet and legs. I (Tom) feel this is the best set of bulls we have ever offered on feet, legs and total package. The top of the top! These sets of calves were weaned early due to lack of rain resulting in extremely dry pastures. They are now living on corn silage, some corn, and full access to hay.

We feed daily with a high roughage diet. Before sale day we will have carcass ultra sound data, semen test results and yearling weights available.

The heifer offering is all of the K7 2019 born heifers after the bottom were sold off as feeders. These heifers are all "the keeping kind", again we have paired them up closely as to the type and kind along with potential. The buyer has the chance to choose from each pair and we will gladly put the other into the replacement pen. Spring and fall heifer calves are sorted the same way. These are powerful prospects on the top end and there are replacement quality heifers all the way through. I (we) are not afraid to keep anything we are offering it is the buyer's choice.

All sale bulls have been 50K DNA tested with enhanced EPD's. We are in the process of DNA testing the last of the replacement heifers and should be done by sale day. Veesers' Triple E Farm and K7 Herefords would be more than happy to answer any and all questions you may have. We will be doing our best on keeping you up to date with information as we get it. Please visit our website www.k7herefords.com or Facebook at K7 Herefords for more information. Videos of animals will be available before sale on these pages. Hope to see you on sale day, if unable to attend in person please join us on DVAuctions on Sunday March 22nd. Have a bite to eat before the sale.

Thank you for your interest and support,

Tom Heidt, K7 Herefords and family
 Veesser's Triple E Herefords – Mark, Greg, and Jeremy

Stand out with Proven Genetics

THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at HerefordFeederCattle.com

“The Hereford Advantage program helps us to focus on providing the best quality genetics that we can possibly provide to our customers - the cattle feeder. We try to select bulls who will sire calves that will excel in the feed yard.”

-NANCY BOWLING

BOWLING RANCH, NEWKIRK, OKLA.

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.

UNDERSTANDING HEREFORD EPDS

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and \$ indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale.

Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been

shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldie Maternal Index (BMSI)

The Baldie Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

SALE INFORMATION

SALE SCHEDULE

Cattle maybe viewed at any time prior to the sale and sale day.
Sunday, March 22, 2020

12 p.m..... Lunch (sale area)
1 p.m..... Sale begins

SALE DAY PHONES

Tom Heidt 608-574-2309
Shane Heidt 319-931-6151
Patti Heidt..... 608-574-6210
Jo Heidt 608-574-6334
Mark Veaser 906-630-3997

AUCTIONEER

Cody Lowderman.....309-833-5543

REPRESENTATIVES

Joe Rickabaugh, AHA 785-633-3188
Mike Sorensen, Livestock Plus..... 641-745-7949

Lunch will be served at noon.

HOTELS

Fairfield, Iowa

Best Western Fairfield Inn 641-472-2200
American Inn 641-451-6600

Mount Pleasant

Super 8 Motel 319-385-8888
Best Western 877-772-3422

Call Jo Heidt if booking help is needed.

TRAVEL TIME

From Des Moines, Iowa, 2 hours; Iowa City, Iowa, 1 hour 15 minutes; Burlington, Iowa, 1 hour; Keosauqua, Iowa 45 minutes

INTERNET BIDDING

Internet bidding DV Auction, www.dvauction.com, absentee bidders who wish to utilize the internet may bid online at www.dvauction.com. Please register online in advance of the sale.

INSURANCE

Will be available on sale day.

DELIVERY

Single purchases made over \$3,500 will be delivered free up to 200 miles. All others we will assist in delivery and make every effort to help you get your cattle home at a reasonable cost.

TERMS AND CONDITIONS

- Each bull will be sold to highest bidder without reservation. The auctioneer will settle any disputes as to bidding and decision will be final.
- Terms of all sales will be cash unless arrangements are made between purchaser and seller prior to sale.
- Individual health papers will be furnished with each animal permitting shipment to any state.
- The animal becomes the property of the purchaser as soon as sold, but it shall be responsibility of the seller to see that the animal is properly cared for until delivered to the purchaser. Any death or injury after the animal is sold is at the buyer's risk.
- Anyone attending the sale attends at their own risk and without liability on the part of the owners or their employees.
- All animals of breeding age are guaranteed breeders. All untried animals are guaranteed to be without known defects, but nothing further. Animals failing to breed after a trial of six-months may be returned to the farm of the seller if in good condition. The seller reserves the right for six-months to try said animal and, if it proves a breeder, to return it to the station of buyer at his expense. If the animal proves a non-breeder, a satisfactory exchange will be made. Complaint must be made within six months from the time of purchase.
- Extreme care has been taken in copying each and every pedigree to avoid errors, but we are not to be held responsible for any error which might appear and which is beyond our control.

HEALTH

Cattle are under the care of Village Vet, Fairfield, Iowa. A veterinarian will be available sale day to write health papers.

SEMEN TEST

The bulls will be semen tested prior to the sale and will sell as guaranteed breeders. Bulls will be trich tested if needed.

Complete ultrasound and performance records will be available on or before sale date.
